# Daily Scrum meeting 30-11-2023

Meeting started: Nov 30, 2023, 4:42:19 AM
Meeting duration: 22 minutes
Meeting participants: Akash Ramgir, Arati Dasa, Jaishree Godge, Shubham Sawant, Tanmay Potbhare

## Highlights

- 03:55 Arati Dasa: Who would you triport functionality have you completed yesterday? Just need to review this task. Why? I have already rebooted, but I'll ohh after watching the board. I will again I will look. And then tomorrow, and have you reviewed the other test task? Yes.
- 04:57 Jaishree Godge: Yes, hello, ma'am. As I've mentioned that I'm working on uh, I was working on FRA itself yesterday. Ohh the whole day. So as I've discussed with you, I was working on admin dashboard. The masters that we have displayed on FRA admin dashboard, the CRUD operation was not working properly. So yesterday I found like I've resolved the issue of add and delete functionality.
- 06:57 Akash Ramgir: No, I was working on it so, but in this functionality I've faced the issue that while updating the records it's giving me the timeout error.
- 07:06 Akash Ramgir: So I have discussed with the the tanmay yesterday about regarding this card. Ohh so he will like a tomorrow. Suggest carnage or thing open and there.
- 07:42 Shubham Sawant: See there is a concept of peer review. Peer review is like 1 developer develops a code, another developer review locally. It's not like junior senior thing, only The thing is why we are focusing on Jaishree and Aditya code is that they are new so they will get a good idea how to write a code. So let's let's see that they will make a mistake, but at a second point we

reviews will help you know. Yesterday I have missed one file apart so that one bug was raised in peer review. Someone test that kind of thing. So in one PR only all the things will fix. So keep that thing be reviews in the place no? Sure. Yes. OK, no issue now for this project. OK. Jessie, no issue. Your update was clear.

- 08:33 Shubham Sawant: It will be completed today.
- 13:58 Shubham Sawant: The issue was the page not there was one page which is not a not found coming on and the page was having some important functionality about approving the payment.
- 14:54 Shubham Sawant: I mean Italian. Hey button I wanna I skipped the mute button. Understand. Got it. One off, a new one off, and let's put like there, which I didn't. You don't want that. Can you Bluetooth? It was a little better. The 20 it's not me. Was coming to office. We can go to the palace. The woman, like on the spot. Shoot. Why are you? After that and then then. Her phone. Tell them. Look, I wish your drivers Sup rhythms. The rivals issue is not for sure. I'm sorry, Sir. Umm, don't think about what a big change. Uh, so the page not found issue was the one of the HTML page was missing. OK. That that's the reason the page page not found issue was coming.
- 16:45 Shubham Sawant: So I have to say I have resolved that issue but due to meetings and lots of other stuff so I don't get time.
- 18:48 Arati Dasa: Yes, Akash is working on our landing page of gram. What gramsathi and the one uh when tomorrow is 1 demo as as an app.

# Transcript

00:00 Arati D.: Hello. What's?
00:31 Arati D.: Hello, can you hear me?
00:36 Shubham S.: Uh, yes, ma'am.
00:39 Akash R.: It's like.
00:40 Arati D.: Good morning all.
00:42 Akash R.: Funny.
00:44 Arati D.: I Aditya start start by you. Explain what is the study's task and

tourist task. Yesterday I could make it where US as I mentioned my box. For example, maybe you can share your screen.

01:06 Shubham S.: Umm yes. Did the first tell me which was you? OK? What was going on? Which was you're working on yesterday?

01:20 Arati D.: It was you.

01:22 Shubham S.: Fellowship.

01:27 Arati D.: No click on that fellowship project. Good. Don't share the screen.

01:33 Shubham S.: There, but don't, don't, don't don't share the screen.

01:34 Arati D.: Just for the beach with you. Well, Prince.

01:41 Shubham S.: That is OK. And we what was your functionality yesterday?

01:48 Arati D.: Today I accept that application.

01:55 Shubham S.: Yeah, the. OK, so this was a this was your functionality, correct? And then ministry, vivid. And in this now today you are to work 2/2 cards. You're going to work. Which 738? 773. My. Petition for update functionality in the card name Aditya. Cardinal song. You left. And physically. OK. OK. OK, you're too sure. UH-10.

02:58 Arati D.: Then wait. Wait, shubham. Aditya, are you facing any challenges in this task? When you work in different challenges going though, I can fix them. OK, no sure. Tell me, proceed.

03:13 Shubham S.: OK.

03:15 Tanmay P.: So yeah.

03:18 Shubham S.: Oh yeah. Yeah, being. Right. Do you need?

03:23 Arati D.: They will tracking and I wrote it down the cards inside it. Your friendly review regardless there the bigger tracking reports from charities ongoing right now and the payment tracking the though there are total four conditions and from that to a completed who have remaining there are two new parts where the payment sheet presentations, installment details should be seen on the.

03:55 Tanmay P.: Something.

03:55 Arati D.: Who would you triport functionality have you completed yesterday? Just need to review this task. Why? I have already rebooted, but I'll ohh after watching the board. I will again I will look. And then tomorrow, and have you reviewed the other test task? Yes.

04:24 Arati D.: And why are you in keeping in pending review section while was it when I put it on the server? OK. Then when will you push this school?

04:36 Shubham S.: And then like with me?

04:38 Arati D.: Sorry, I will put it in terms of, OK. Then send me. Jaishree see. It's.

04:57 Jaishree G.: Yes, hello, ma'am. As I've mentioned that I'm working on uh, I was working on FRA itself yesterday. Ohh the whole day. So as I've discussed with you, I was working on admin dashboard. The masters that we have displayed on FRA admin dashboard, the CRUD operation was not working properly. So yesterday I found like I've resolved the issue of add and delete functionality.

05:22 Jaishree G.: Now I'm I have to work on update functionality and I also want your inputs regarding the uh charts and like what statistics we have to show on admin dashboard and regarding other functionalities also. And as I have mentioned in yesterday's daily report that we have to host the FRA Mongo DB database on Preserver.

05:47 Arati D.: Yesterday, I once again I asked to myself and can you please mention in that report you have mentioned that the bugs in the add and delete are resolved for five out of 6 masters. Like mention that master naming in this sheet. Also, daily report. Yes, that's good of six must have missed. Which master please specify the names of master.

06:12 Shubham S.: Uh, sorry to interrupt, ma'am. One minute our FF Fellowship project was going on. How come? Before I came, at least let the Akash do review on this my screen and you can see you can see my screen right. Hello. Yeah. So Akash, Akash, one card, I can see active 7:30 at application form update functionality. So let Akash you first the this. Yeah. And he's an update on this card. And then we moved next project. Let it go by project by project.

06:46 Arati D.: Organize. Show akash. Proceed.

06:51 Shubham S.: Akash, why you keep keep this correct too. Just give us a good information and if you are not working on it, move it to new.

06:57 Akash R.: No, I was working on it so, but in this functionality I've faced the issue that while updating the records it's giving me the timeout error.

07:06 Akash R.: So I have discussed with the the tanmay yesterday about regarding this card. Ohh so he will like a tomorrow. Suggest carnage or thing open and there.

07:22 Shubham S.: No vision and I want to ask one question. Who is going to review your task? Because you are reviewing Aditya. Sanjay's task. So what about who is going to review your task is is like you want Akash to help in the review. Yes, I think that.

07:40 Tanmay P.: Yes, right, taking that one. You good your profession?

07:42 Shubham S.: See there is a concept of peer review. Peer review is like 1 developer develops a code, another developer review locally. It's not like junior senior thing, only The thing is why we are focusing on Jaishree and Aditya code is that they are new so they will get a good idea how to write a code. So let's let's see that they will make a mistake, but at a second point we reviews will help you know. Yesterday I have missed one file apart so that one bug was raised in peer review. Someone test that kind of thing. So in one PR only all the things will fix. So keep that thing be reviews in the place no? Sure. Yes. OK, no issue now for this project. OK. Jessie, no issue. Your update was clear.

08:33 Shubham S.: It will be completed today.

08:35 Arati D.: Alright, you can. Yes, wouldn't if I commenced.

08:40 Shubham S.: Do mention uh, add comments here. Look the this after your card is completed. Add comments here like saying that this tag arti Mam here and your comment that I have completed this work so that you know it RTM also know that you are this card is also completed. OK. So no one need to ask what is updated to card, you will get when you mention someone. Email will directly trigger to that particular person that this work is completed.

09:08 Jaishree G.: OK.

09:10 Arati D.: Shubham one minute while approving the PR that time, you means other developer review that code and then that task is moved to the closing section while approving the PR that time review the code of another developer uh. See simply ************, or that's easy.

09:31 Shubham S.: Let's see. This is a PR OK. Yesterday I have given it OK. I am the reviewer added by policy. OK, so my question was if you review the PR, if you hit on approve, OK then I will come and I will approve it. Will help you know at this point what we are. We are randomly creating PR and we are approving our own PR and it is getting merged. But going forward, we will keep that practice like someone will come and put the PR and then only that PR will get merged. So I will

add policy to all the branches that at least two reviewers to review the code.

10:10 Arati D.: I don't know three so well. I was typing. Wasn't new killing laptop was new killer, so the double levels at that you working.

10:23 Shubham S.: Hello.

10:50 Arati D.: OK, Shubham, yes, yeah. Here. Yeah.

10:57 Shubham S.: All those stories completed. OK, very close. With the restoring OK motion, this is active. So Akash, again the card is on your.

11:08 Akash R.: Yeah, I'm currently working on the this card.

11:12 Arati D.: So I'm gonna play with, you know, your discard.

11:15 Shubham S.: Card. Landing page changes OK.

11:18 Akash R.: So yesterday I have completed the leader sections where the leaders truly and it is a responsive also another today I'm reading the chair and I further requirements I've heard designing the UI. So after designing I will put the constraint on it. How was it will be your are done. I will move pending and hand over to the Artemenko remains. They yes.

11:45 Shubham S.: Umm, so our ERP also we have to give Friday updates. So, ma'am, can you give us a, like, brief what is pending and what is to be done?

11:58 Arati D.: Yesterday I have completed the admin dashboard and login admin login functionality. Then I have added to company master and when a material master but just only labels given the sidebar. Now today's work is vendor login functionality. I have added yesterday vendor login vendor, adding functionality then two days vendor login functionality is pending and once the vendor login is completed then it moved to the that application form that is a pure related information. Once you submitted the all the information then it moves to the then it's generate the QR code after submitting the form.

12:40 Shubham S.: OK, this three task. So you need any help from team.

12:48 Arati D.: Right now, no. If if I need any help I will ask anybody.

12:56 Shubham S.: OK, my son, apart from that. Uh, you will add a report, correct?

13:03 Arati D.: And yes, door. No, I'm uh, I will add that.

13:07 Shubham S.: And let's see how can you do it? What are you doing? No, I'm just giving you an idea how we can do it. That's the location.

13:18 Arati D.: Ohh.

13:21 Shubham S.: Initialize OK, it's done. Just clone the repo, OK and push it like

normally. How you push the code to get anytime. And right now we will not create any pipeline. Later we will create it.

13:36 Jaishree G.: Pipeline later, we will.

13:36 Arati D.: OK.

13:39 Shubham S.: Yeah, but from that now.

13:42 Arati D.: So can you explain about aadiswayam? What is the current status? Uh, yesterday I noticed that you just tried. You return only the fix the aadiswayam design, but you're not mentioned what type of design. That only one mention that fix the design.

13:58 Shubham S.: The issue was the page not there was one page which is not a not found coming on and the page was having some important functionality about approving the payment.

14:07 Shubham S.: I'm sorry. Placement related documents. OK, so that page was showing for not 4 error. So that page was not added and accidentally got deleted from my PR and PR got approved. OK. So that is that is what I'm talking about. Pre review. OK, I have not added that page in my PR and PR got approved and it got merged. Although code about much, but at one point on Preserver the code was getting code was showing for not for not for that is.

14:48 Jaishree G.: I that

14:54 Shubham S.: I mean Italian. Hey button I wanna I skipped the mute button. Understand. Got it. One off, a new one off, and let's put like there, which I didn't. You don't want that. Can you Bluetooth? It was a little better. The 20 it's not me. Was coming to office. We can go to the palace. The woman, like on the spot. Shoot. Why are you? After that and then then. Her phone. Tell them. Look, I wish your drivers Sup rhythms. The rivals issue is not for sure. I'm sorry, Sir. Umm, don't think about what a big change. Uh, so the page not found issue was the one of the HTML page was missing. OK. That that's the reason the page page not found issue was coming.

16:45 Shubham S.: So I have to say I have resolved that issue but due to meetings and lots of other stuff so I don't get time.

16:53 Shubham S.: But yesterday when I gone home I have created lots of other cards. OK, so there is a lot of work in the you know this is our at this point. We have now lots of a lot of user stories created, bugs created, lots of review. Work is

also there. Uh, so try to go it because no inserts expectation is that he want to test the software, although he has given 10 December, but it is a good idea that you know today only I will send him a all the credentials of the pre server so he can cross verify whatever he want.

17:31 Shubham S.: OK, so Aadiswayam is a very big project to understand. There are lots of other things and I will like. A who schedule one meeting with all of you so that I can explain you what is aadiswayam and how it works. So that testing, specially those those people who do test the software, they will have a good idea of like what to test and all other stuffs. It's very big. It's even bigger than fellowship. OK, fellowship is just 25% of what aadiswayam means, so I'm not complaining anyway, I'm just telling you the idea. We need to be very little bit the you know. Ohh concentrated on the aadiswayam because it has a four users. Uh, let Arti mam decide. That thing went to the things go to testing.

18:25 Shubham S.: So, ma'am, you only decide when we have an internal testing going on. We'll plan accordingly. It's thank. Democratic and. OK. And Akash will also be free I guess.

18:48 Arati D.: Yes, Akash is working on our landing page of gram. What gramsathi and the one uh when tomorrow is 1 demo as as an app.

18:57 Arati D.: So once it is completed then we will schedule the meeting for Aadiswayam project review. OK. Have you sent the mail regarding that? Overall this via M does bending. Because today you send in that mail only 5 functionality is pending.

19:17 Shubham S.: OK, let me let me, let me tell you how that things work, OK, so. Just look at the teams screen. So you will get a, you will get an idea. So whenever in the boards there is an option named queries. OK so I have already made one query here so you can see there is a. This is a query. If you are to go to the editor, mention work item, work item type. So I say task and on week Sprint I want to see the task OK. So when I hit run query OK so it will give me all the task on that particular particular board which is an on which state it is so like new state or close state.

20:02 Shubham S.: OK so here anyone can go and they can query the steps and they will get the list of all the tasks. OK, if you say you don't want to see the task, you want to see the user story. So here is the user story. Run the query. See

again, you will get all the user stories on that functionality. And if I say all OK, there is option for all any again. So run the query and you will get all the user story as whether task on the screen here. So maybe it will be helpful for you to, you know, get the weekly report vertically rather than seeing into the emails. You can directly get what things are pending, what things are closed, closed, means done, things are there and active is currently working.

20:42 Shubham S.: New things which are pending on the board, so here we can get a this kind of reports and there is a chart also again. Sorry. Wait a minute. Leave. It was generation chart so yes. So here it it is a charter. So, like how much is closed? How much is new and how much is active? So this will this will help us to, you know, get the things done properly, like how much user stories are pending, how much work is done, how much work is not done like that. So we can query accordingly so that that is that was a a demo report I have seen yesterday that this is how we can get a report on each and every project. So we can create a report for let's say, umm FRA, Sri fellowship.

21:33 Shubham S.: Bull queries. You go here a new query. What type any here? If you want to get a query according to what we said is according to Sprint, go to iteration path and select the current Sprint. So I guess, uh, then when is your current Sprint? Is Sprint 1 correct? Yeah. Yeah. OK, so if you run the query here you will get which task I sent to who and what is the state of task. So at the end of every Sprint we can query the query these things and get the report and just click here export to CSV and the report will get export. You know download section. That's all any question regarding this.

22:22 Arati D.: No.

22:24 Shubham S.: OK, no problem.

22:25 Arati D.: Let's review the waiting. So everyone, if you if you anywhere stuck in this any coming task or current tasks then please don't hesitate to ask someone please first try to try to yourself first
